

# Silicone Lube

Fortron Silicone Lube has a wide range of applications and the choice of superior silicone fluids in this product helps to differentiate Fortron Silicone Lube from others.

## FEATURES

Fortron Silicone Lube provides superior lubricating and tenacity of the silicone. A blend of differing molecular weight silicones is used to achieve a stronger and longer lasting film.

Lower molecular weight silicones provide ease of application, better penetration, easier shine, good anti static and thinner films, whilst the selective incorporation of higher molecular weight silicones adds to the resilience and tenacity of the film – providing extended service life, plus release properties for mouldings, etc.

## SUMMARY OF BENEFITS

- Lubricates
- Waterproofs & seals
- Penetrates
- Provides lustre
- Anti-static and anti-corrosion
- Eliminates squeaks generated between like or dissimilar material, e.g. glass, plastic rubber
- Protects against corrosion
- Suitable for all automotive seal applications
