

# One Shot Coolant

Fortron One Shot Coolant is a specially formulated Hybrid Coolant that contains a premium blend of ethylene glycol and corrosion inhibitors.

## SUMMARY OF BENEFITS

- Protects all metal surfaces from rust, corrosion, cavitation and erosion
- Designed to protect engines with aluminium heads or blocks
- Equally effective in diesel and petrol engines in all types of vehicles
- Exceeds corrosion resistance specification of Australian Standard AS 2108-2004 Type B
- Lubricates water pump seals
- Compatible with Fortron Cooling System 2000 and most modern MEG Antifreeze/boil coolants. To avoid possible incompatibility problems always avoid mixing with other coolants where possible
- Not harmful to radiator/heater connector hoses or diesel liner seals and 'o' rings
- Helps maintain original design heat transfer rates and engine performance
- Controls scale formation on hot metal parts around the engine combustion chamber, therefore increasing useful engine life and reducing maintenance costs
