

Automatic Transmission Stop Leak

Fortron Automatic Transmission Stop Leak is an ash free seal conditioning fluid for automatic gearboxes. It may also be used for power steering units using Dexron II type fluids.

Fortron Automatic Transmission Stop Leak is a carefully formulated ash free synthetic seal conditioning agent designed to increase the flexibility in seals and 'O' rings commonly used in automatic gear boxes.

The action of Fortron Automatic Transmission Stop Leak should be expected to be slow and deliberate with a reaction time and a gradual take up of leaks should be anticipated.

SUMMARY OF BENEFITS

- Helps restore tolerance and flexibility of seals
- The active components help stop transmission oil leaks
- May also be used in power steering units
