

WD Ultra Lube

Fortron WD Ultra Lube is a unique balanced formulation that has been enriched with lanolin to provide exceptional lubrication, penetration and corrosion protection.

The lanolin enrichment provides strong boundary lubrication and corrosion inhibition to neutralise corrosion and leave a sound protective film. The choice of solvents, chemicals and lubricating agents in WD Ultra Lube ensures effective and safe protection to the widest range of metals and components.

SUMMARY OF BENEFITS

The powerful capillarity action helps loosen rusted, frozen nuts and bolts. The balanced complement of solvents, surface active and lubricating components facilitates a controlled drying action, ensuring penetration, lubrication and corrosion protection.

Fortron WD Lube is industrial strength, but can be used safely for all automotive, domestic, farm, workshop, motorcycle, marine and earth moving applications where water displacement, penetrating, lubrication and corrosion protection is required.

- Effective and Safe Protection
- Protects all surfaces against rust/corrosion
- Strong long lasting protective film
- Prevents squeaks and wear
- Non-silicone formulation eliminates paint implications.
- Dries Ignition leads
- Superior lubrication
